

[CeCon 3000]

Central Concentrate Supply System

FUNCTION **CeCon 3000** is for continuous concentrate supply of dialysis units.

Dialysis can be supplied with up to three types of concentrate. To ensure a smoothly operation we attach importance to safety, operator and service convenience as well as accordant longevity of the system.

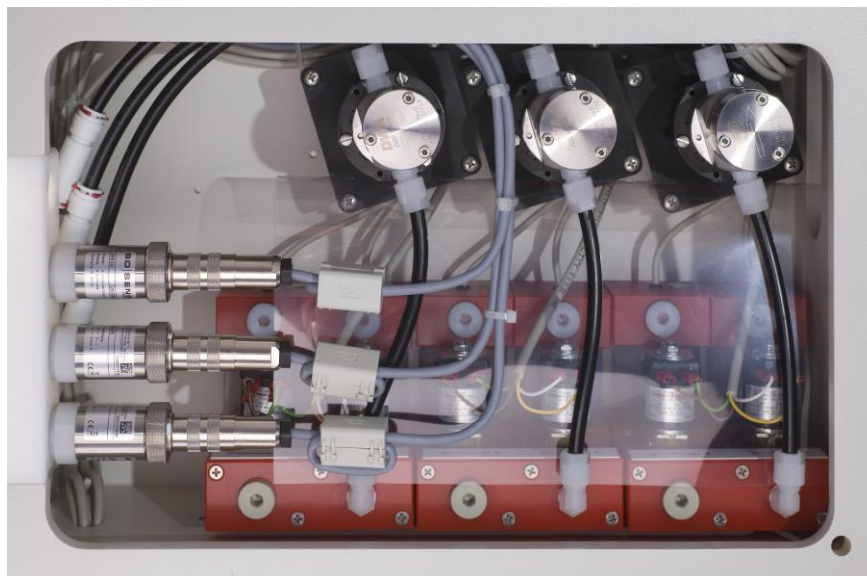

The system is compatible with all types and sizes of containers. It is space saving and operates by pressure control without additional ventilation. The active exhaust of the pipes will be carried out by hose pumps.

At operation of a central concentrate supply system **CeCon 3000** the concentrate is supplied by big canisters instead of one-way canisters. The system delivers the concentrates through a ring main into the dialysis rooms to the individual sampling points.

The **CeCon 3000** includes all necessary parts, like pumps, pressure sensors, automatically container switch as well as the required electronic with optional remote control and potential-free outlets for alarm indication.

Your advantages at a glance:

- Compatible with all types and sizes of containers
- Less waste
- No handling and storage of canisters
- Central concentrate supply with up to three concentrates
