

# [ Chlorine Filter ]

Clean – Low Costs – Reliable

## FUNCTION

Through the **DWA Chlorine Filter** all chlorine products like free chlorine, chlorine dioxide and hypochlorites which are used for the sterilisation of water and have an oxidising effect are chemically removed from the water by means of reduction.

The pellets in the **DWA Chlorine Filter** are a chemically reacting material. It is used depending on the amount of chlorine in the water and which is checked and simply refilled in the scope of the regular maintenance work, if needed.

In comparison with a conventional active coal filter and the **DWA Chlorine Filter** the high risk of contamination due to the active coal, spare the tedious exchange of the active coal can be excluded and thus save on the operational costs.

### Your advantages at a glance:

- ▣ Low operation costs
- ▣ No exchange of activated carbon required

If you have questions about the **DWA Chlorine Filter** please feel free to contact our Export Department.
